

Quality Control Manager – Richmond, Indiana

Primex Plastics Corporation, a wholly owned subsidiary of ICC Industries, Inc., is an international leader in the extruded plastic industry. Primex and its' Subsidiaries provide custom plastic sheet extrusion, compounds, colorants and a myriad of value added services for many applications including food, cosmetic and medical packaging; bottles and closures; toys, horticultural and industrial products; dunnage and automotive components. Primex operates eight manufacturing facilities throughout the country, including two color and compounding operations, a recycling operation, a chemical laboratory and its own distribution system.

We are currently seeking a Quality Control Manager for our Richmond, Indiana location. This position will be responsible for all activities at the Richmond Quality Lab, and will serve as a resource to our customers and suppliers for quality, technical and regulatory issues. This position will have frequent interaction with counterparts in Operations, Engineering and the Commercial Development Departments, and duties and responsibilities include the following:

- Supervise overall quality control processes for the Richmond manufacturing operations
- Perform lab analysis and testing requests on various materials / products
- Interface with customers and suppliers on quality and regulatory matters, specification and technical issues including part design, tooling, polymers, forming, trials, ASTM methods, etc.
- Apply and administer Quality Management Standard ISO 9001 – 2000 System
- Investigate returned products, complete variance and root cause determinations of off-spec materials and implement appropriate corrective action programs
- Participate in internal and external quality audits
- Provide customer material certifications, product certifications, SPC data and other test data
- Process Technical Work Requests and prepare Technical Reports as needed
- Create continuous improvement programs and/or processes to reduce costs

Minimum Requirements

- Bachelor's Degree in Quality Control, Quality Engineering or related discipline/experience
- 5+ years quality management experience including laboratory experience, and ISO 9001 Systems
- Knowledge of GMP and Statistical Process Control
- Proficiency in Microsoft Office Applications
- Excellent communication and interpersonal skills
- Experience with standard plastics testing laboratory equipment and procedures a plus
- Excellent ability to problem solve and communicate to assist customers in support of our products
- Six Sigma training/certification a plus
